

# #6 Project Time

PMBOK 5 Ed. – DEI-

“Lost time is **never  
found**”

“You may delay, but  
**time will not...**”

**Benjamin Franklin**

An hourglass is shown on the left side of the image, mounted on a wooden stand. The hourglass is partially filled with white sand, with more sand in the bottom bulb than the top. The background is a blurred, dark-toned industrial or workshop setting. A large, bright pink circle is overlaid on the right side of the image, containing white text.

Time has the **least amount of flexibility;**

Schedule issues are the main reason for **conflicts** on projects, especially during the **second half of projects**

The process required to  
manage timely completion of  
the project

**PROJECT TIME MANAGEMENT**

Plan Time

Define Activity

Sequencing Activity

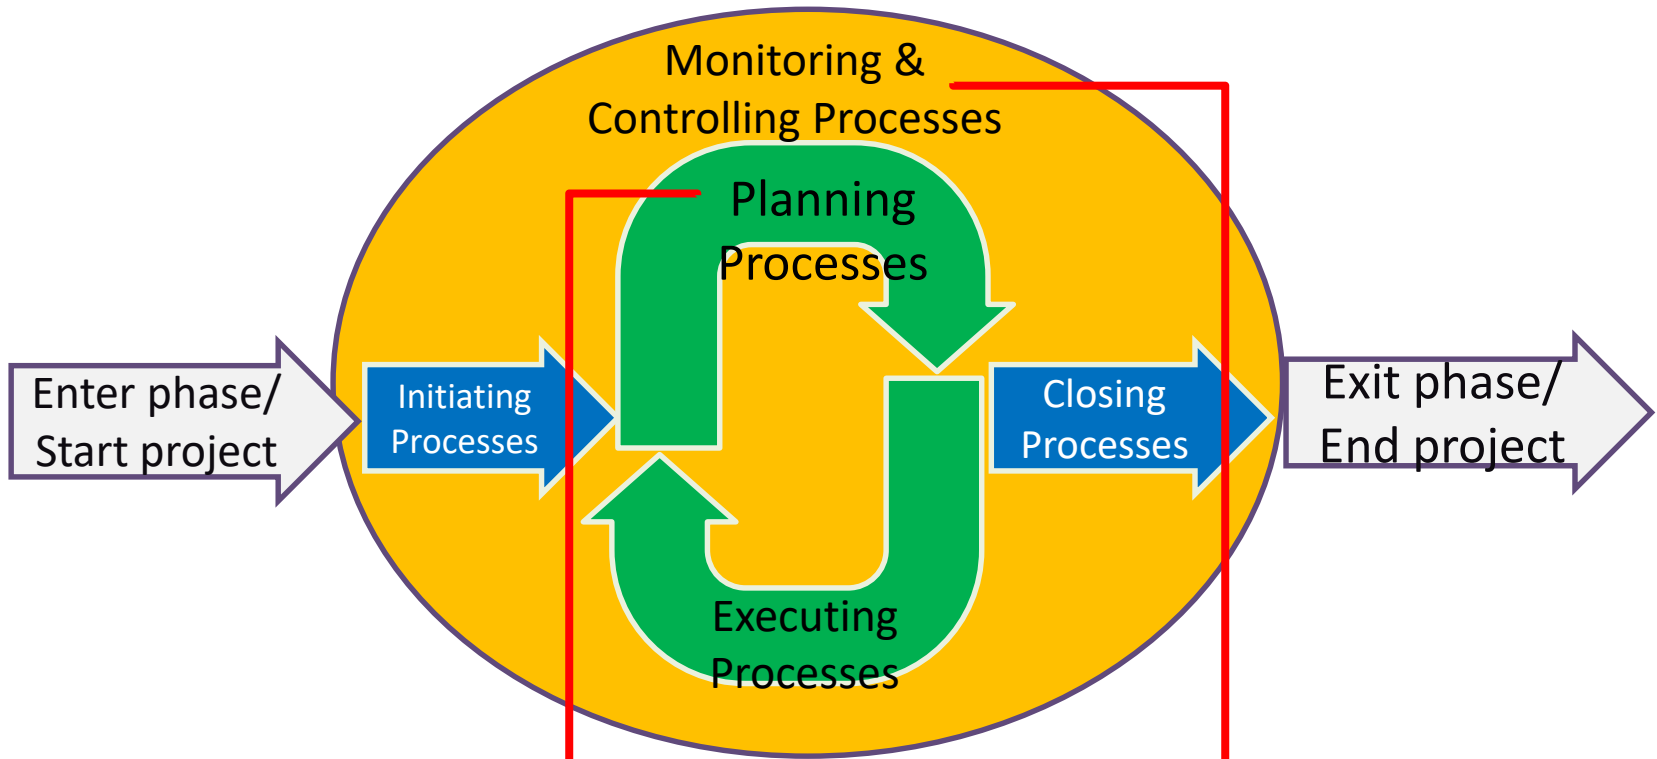

Estimate activity resource

Estimate Activity Duration

Developing the schedule

Controlling the schedule

Knowledge Area	Process				
	Initiating	Planning	Executing	Monitoring & Control	Closing
Scope		Plan Schedule Activity Definition Activity Sequencing Activity Resource Estimating Activity Duration		Control time	

# Plan Time

“Determining the policies, procedures, and documentation to manage time”

## Inputs

1. Project Management plan
2. Project Charter
3. EEF
4. OPA

## Tools & Techniques

1. Expert judgment
2. Analytical technique
3. Meetings

## Outputs

1. Schedule management plan

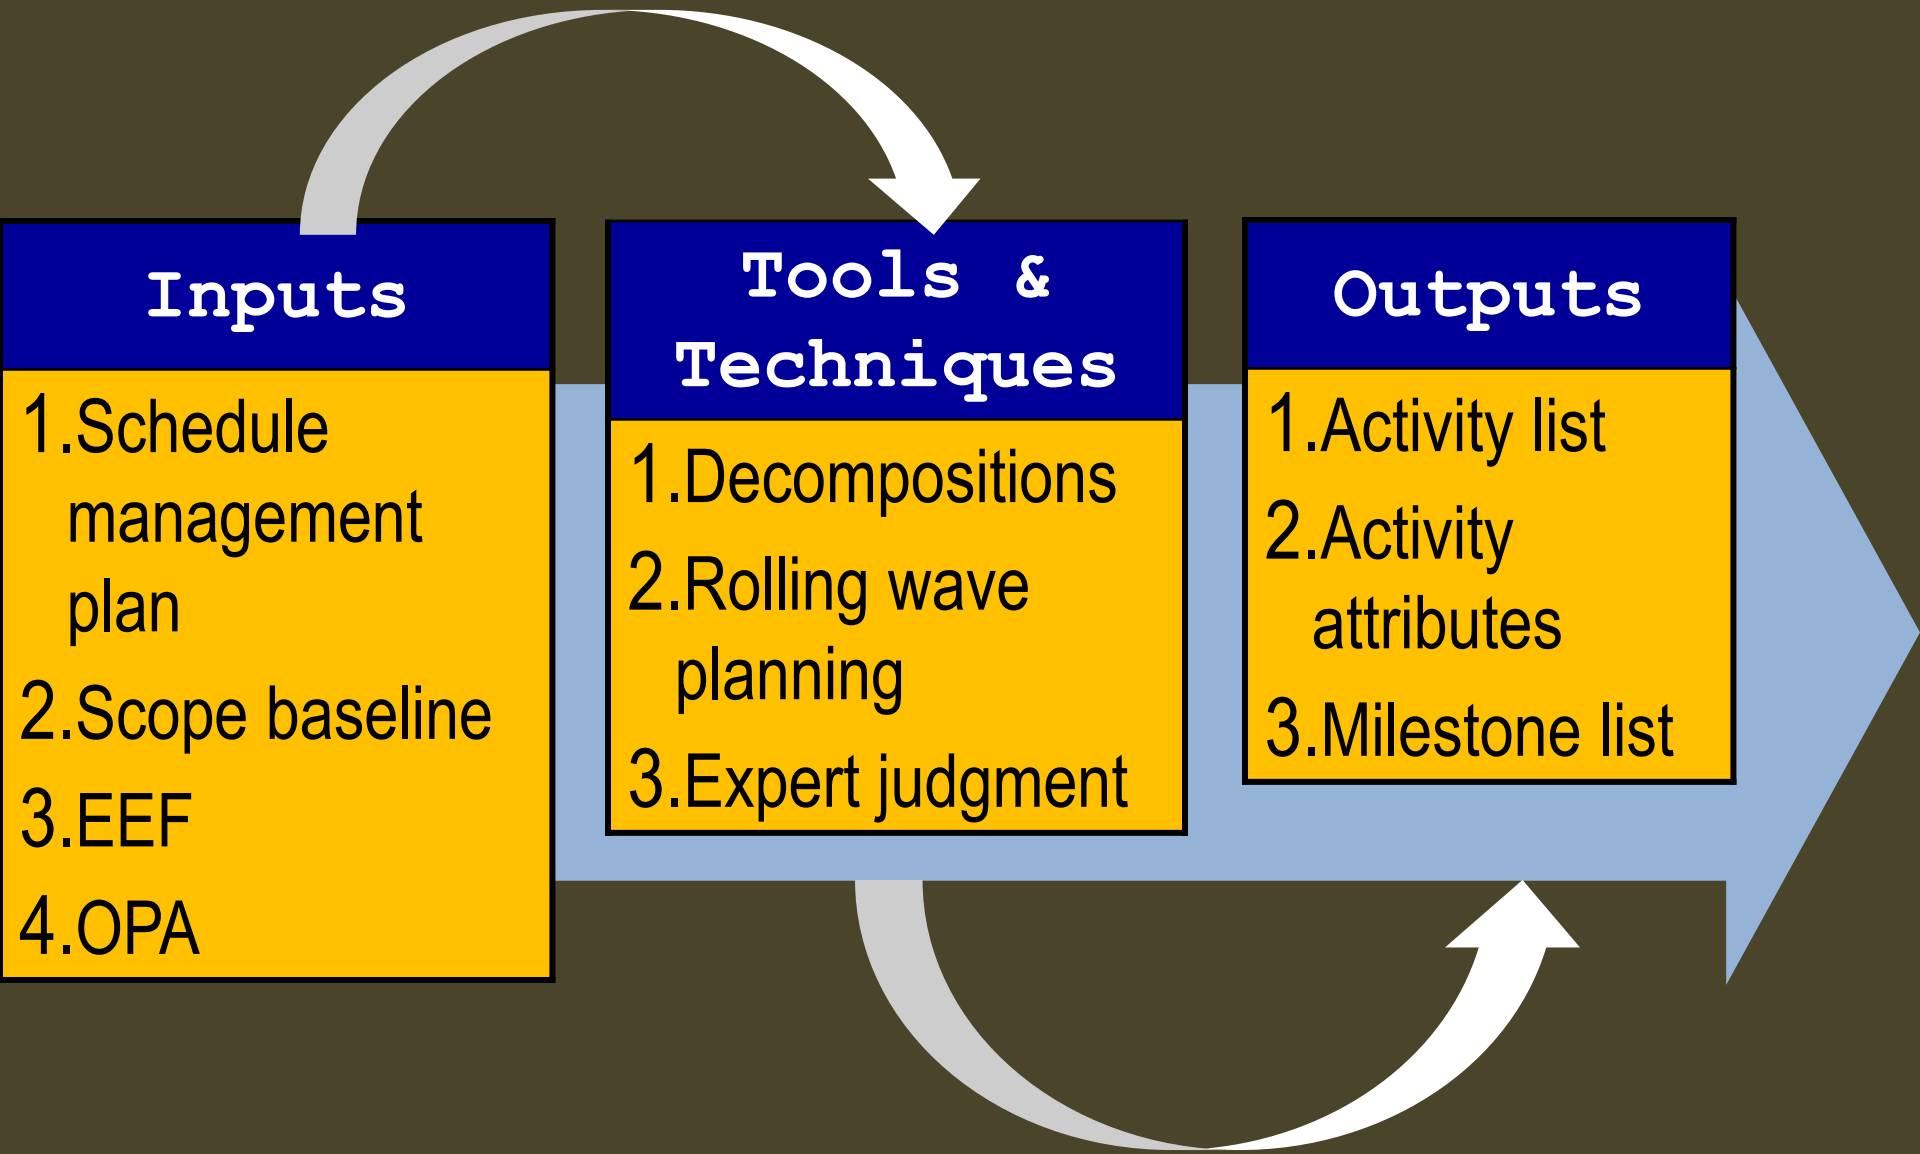

**“Identifying the specific activities to produce the project deliverables”**

Work package decomposed into activities

**DEFINE ACTIVITY**

## Inputs

1. Schedule management plan
2. Scope baseline
3. EEF
4. OPA

## Tools & Techniques

1. Decompositions
2. Rolling wave planning
3. Expert judgment

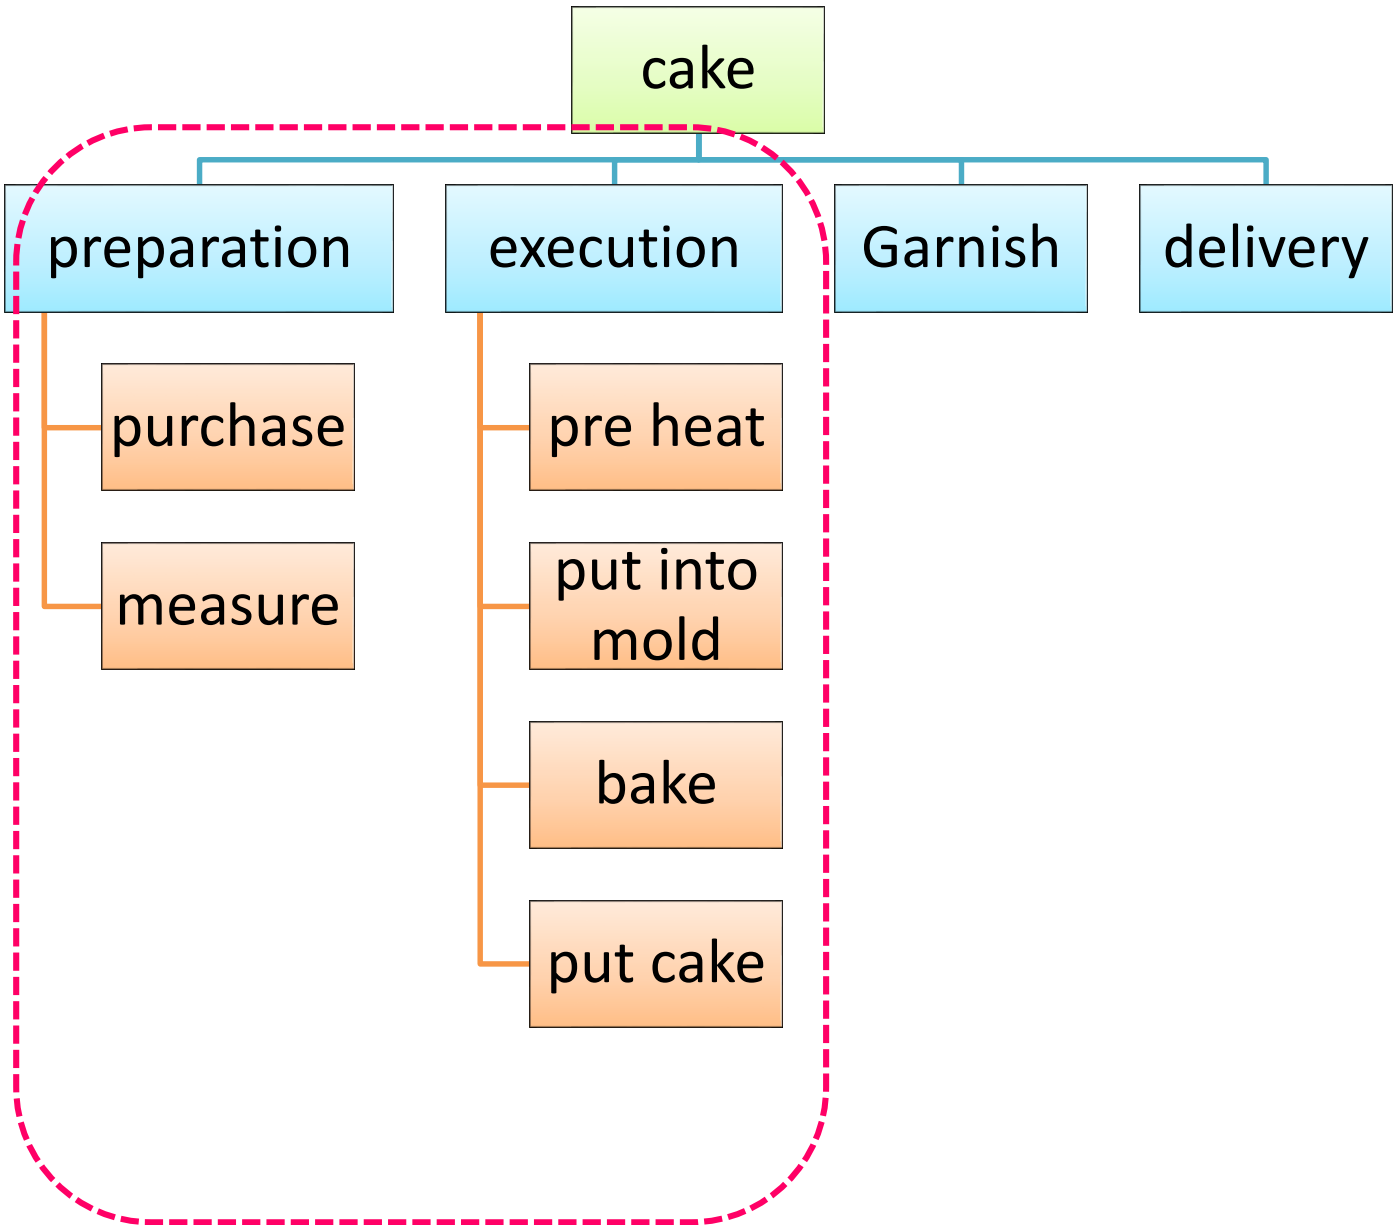

## Outputs

1. Activity list
2. Activity attributes
3. Milestone list

# Rolling Wave

**Planning:** similar to decomposition method but **only prioritize the easiest and well defined** work package of activity

# Activity Attribute:

- Used to identify e.g. responsible person, place, level of effort (LOE), apportioned effort (AE), Date

# Milestone

- a **significant point** or event in the project.
- Not a work activity
- **No duration**
- **Checkpoint**

# SEQUENCE ACTIVITY

identifying and documenting the relationships between project activities.

## Inputs

1. Schedule management plan
2. Activity list
3. Activity attributes
4. Milestone list
5. Project scope statement
6. EEF
7. OPA

## Tools & Techniques

1. Precedence diagramming method (PDM)
2. Dependency determination
3. Applying leads and lags

## Outputs

1. Project schedule network diagram
2. Project document updates

# Precedence Diagramming Method (PDM)

Method used in **Critical Path Methodology(CPM)**

**Activity on Node**

**No dummy activities**

Logical relationship

# Logical Relationship in PDM

---

Finish to start

Start to Finish

Finish to Finish

Start to Start

**Activity A**

**Activity B**

**Relationship**

Finish to start

“You have to make a dough first for baking process”

Finish to start

FS=5

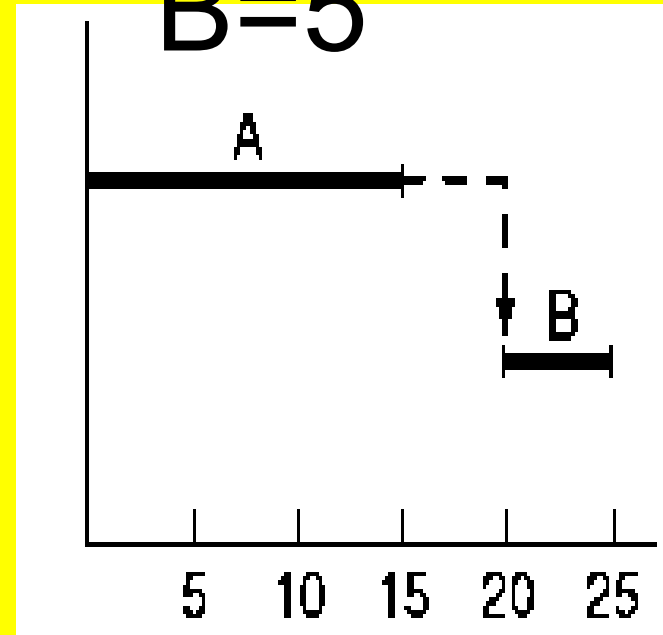

Activity A

Activity B

A=15

B=5

Start to Finish

“start campaign while the former leader waiting the end of his period”

# Start to Finish

A=15

SF=25

B=15

A man in a striped shirt and shorts is operating a red, motorized paint machine on an asphalt surface. The machine is applying a thick white line to form a parking space. The background shows a parking lot with several white trucks and a chain-link fence. The scene is brightly lit, suggesting a sunny day.

Finish to Finish

“Paint parking line while lay asphalt”

# Finish to Finish

A=15

FF=5

B=10

Start to start

“Furniture move in while employee  
move in as soon”

# Start to Start

A=10

SS=5

B=15

# Applying Leads and Lag

- **support realistic and achievable** project schedule.
- Each activity is connected at least to one **predecessor** and one **successor** except the start and the end.

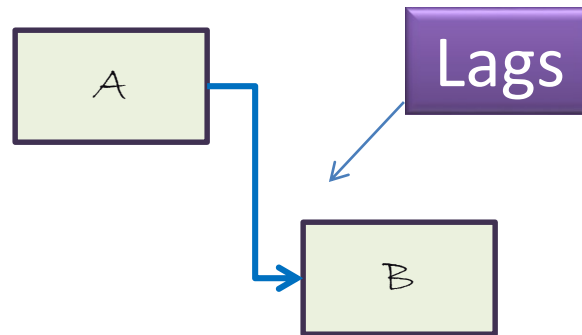

# Applying Leads

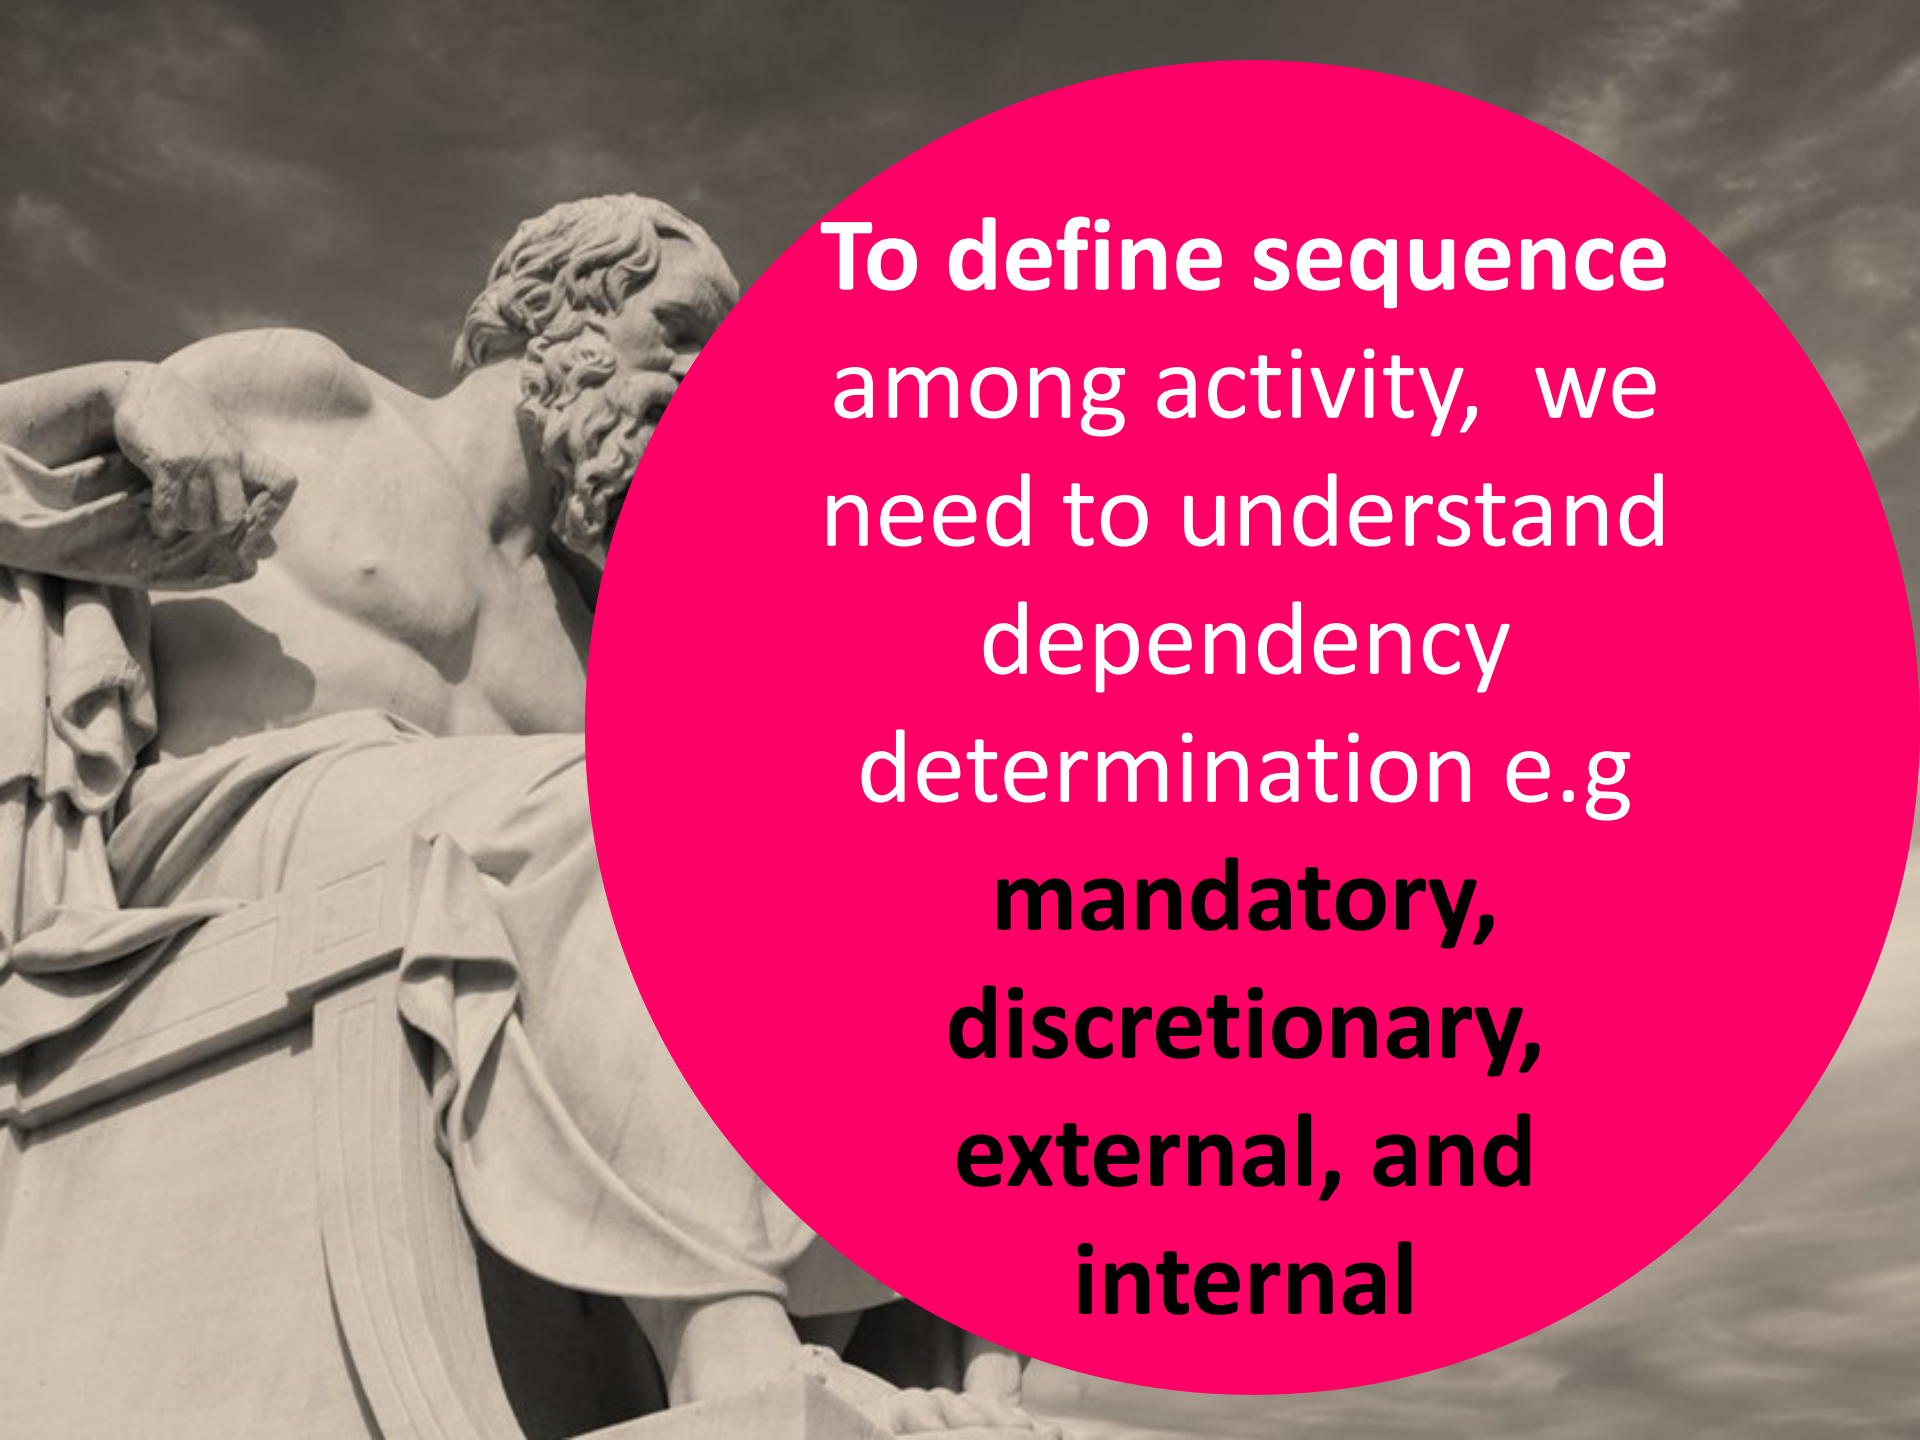

Start an activity **before the predecessor activity is complete.**

# Applying Lags

“Inserted **waiting time** between activities”

To define sequence  
among activity, we  
need to understand  
dependency  
determination e.g  
**mandatory,**  
**discretionary,**  
**external, and**  
**internal**

**Mandatory  
(hard logic)**

**Discretionary  
(knowledge base)**

**External  
(third party)**

**Internal  
organization**

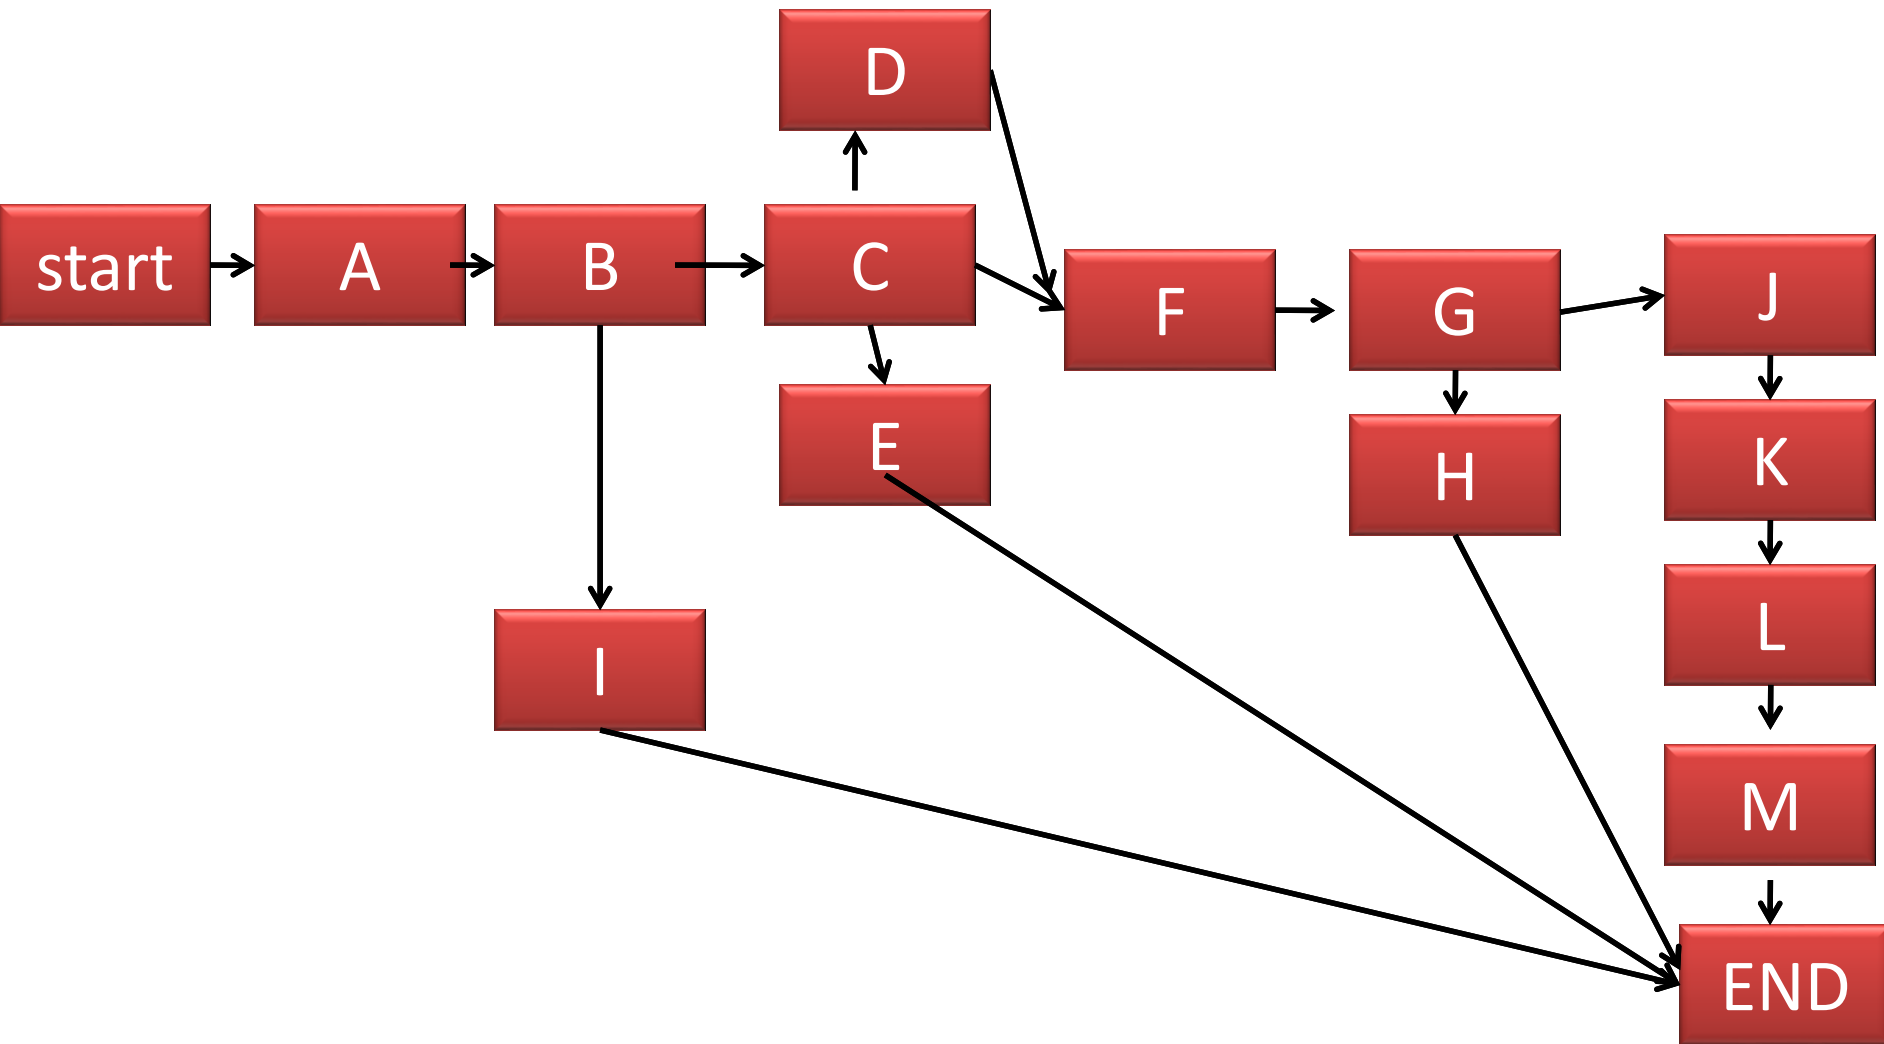

**Dependency Determination**

# Example: The activity List and the sequence

ID	activity	predecessor
A	Purchase the material	-
B	Measure the ingredients	A
C	Mixing	B
D	Pre heat the oven	C
E	Put the batter into mold	C
F	Bake the cake	C,D
G	Put the cake in the plate	F
H	Cut the unnecessary side of the cake	G
I	Mix the cream	B
J	Garnish the cake	G
K	Put the cake into fridge	J
L	Package the cake	K
M	Delivery the cake	L

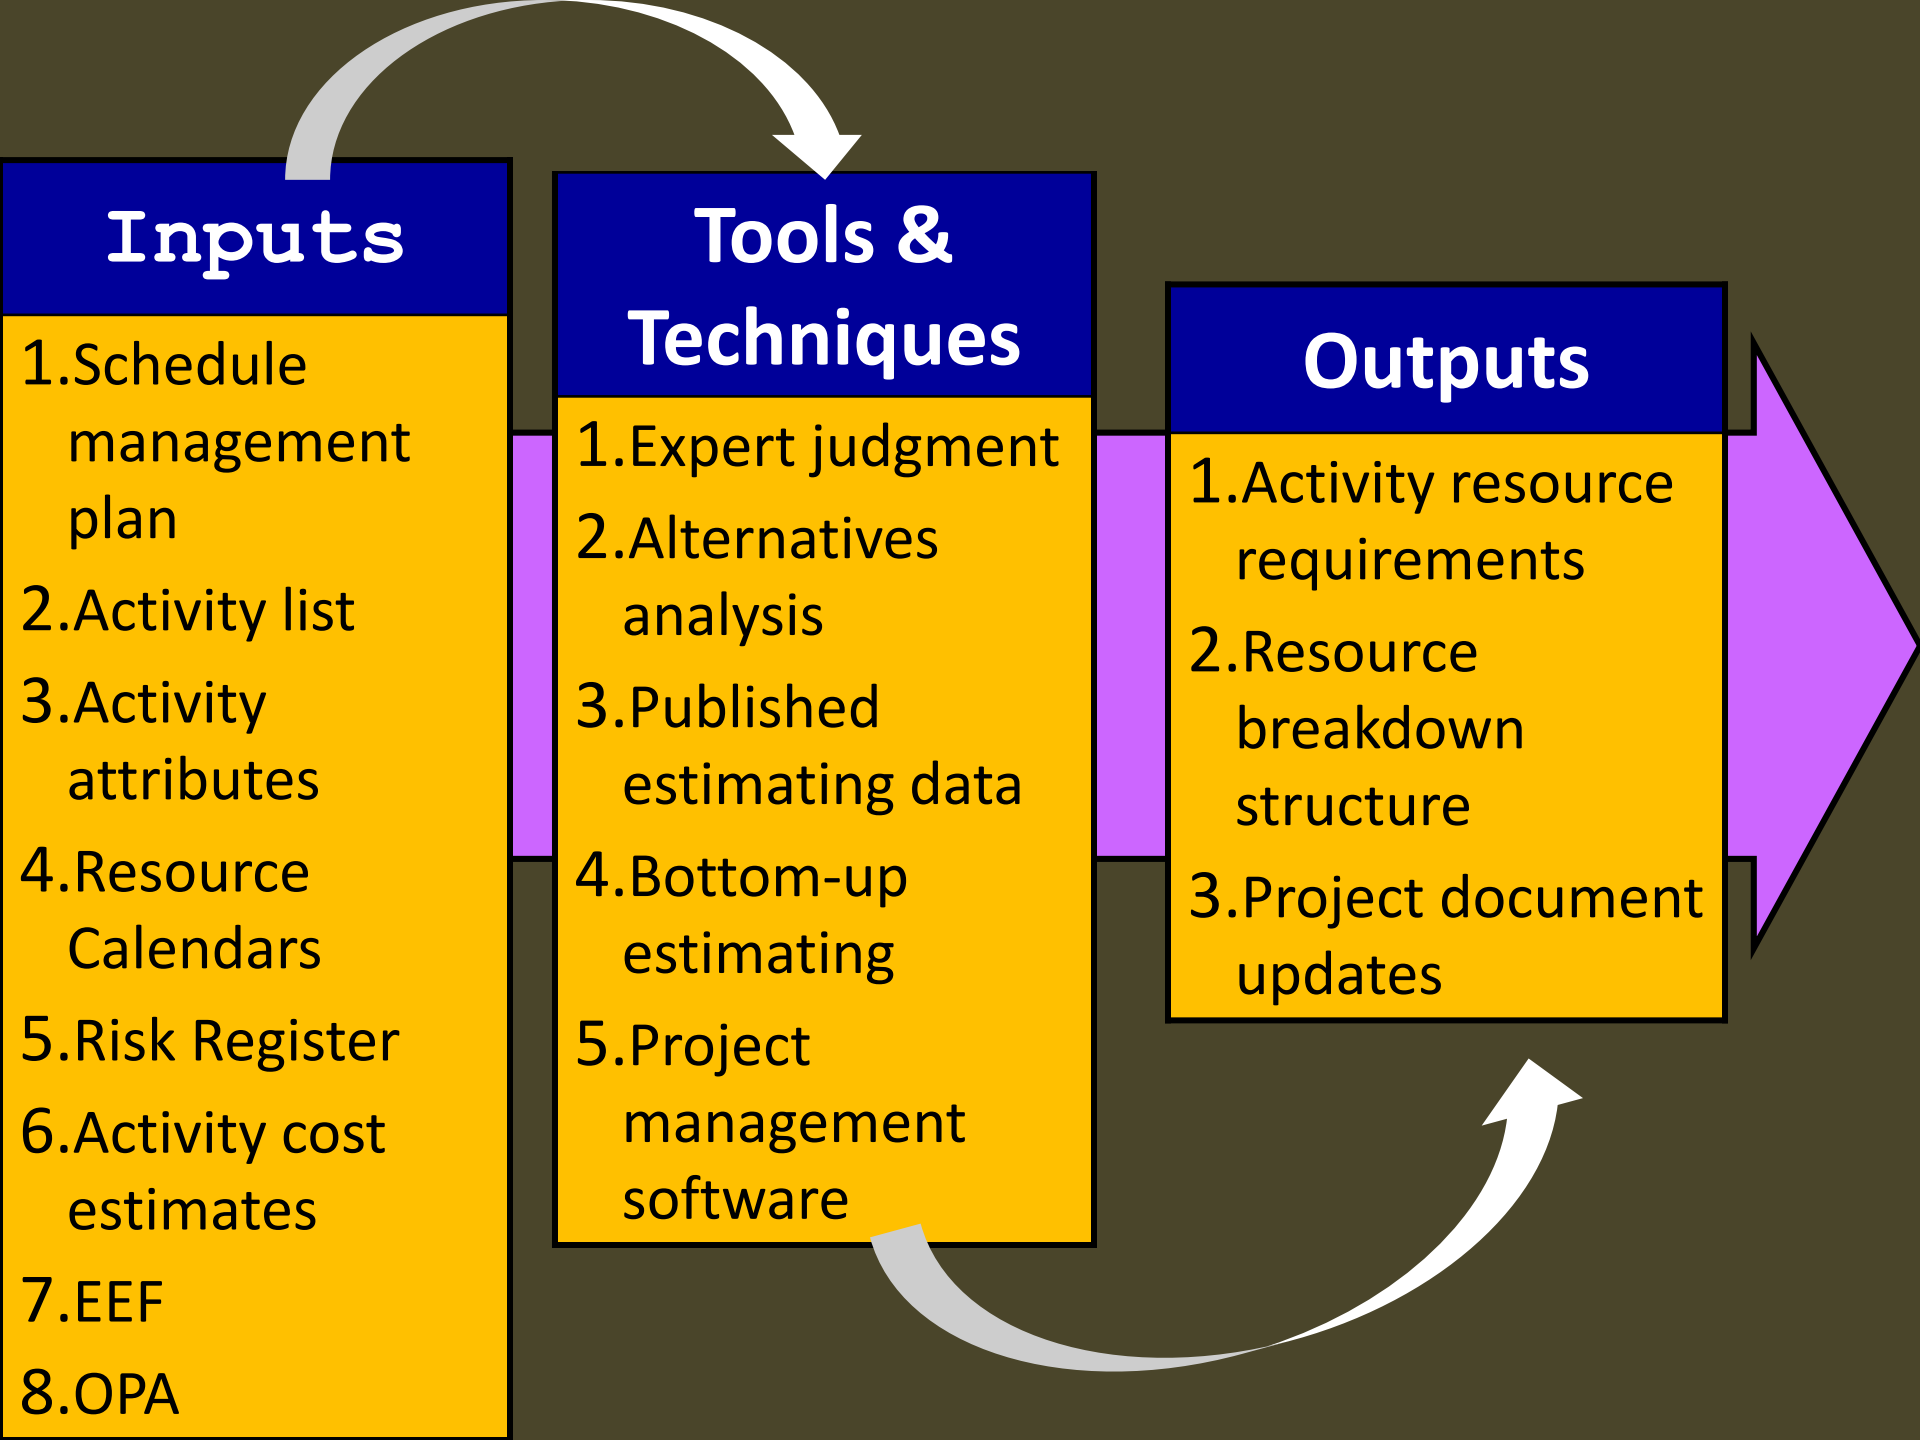

Example: The Network Diagram (PDM)

# Estimate ACTIVITY Resource

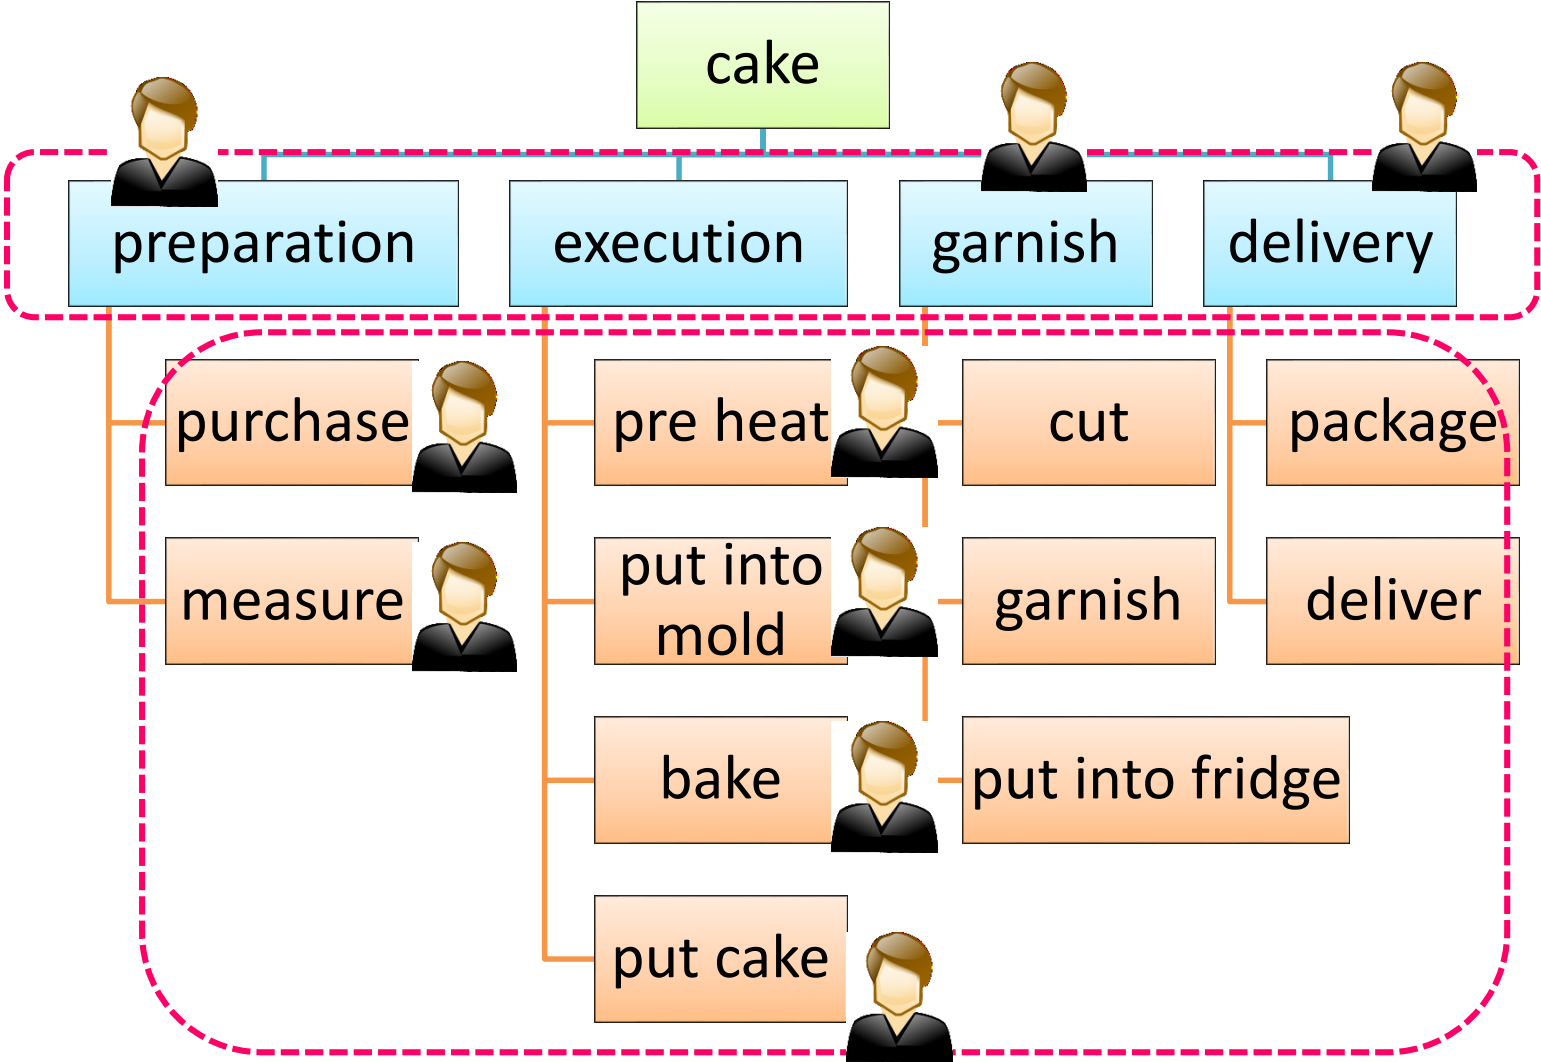

estimating how many resources— people, equipment, and materials

# Bottom up estimating

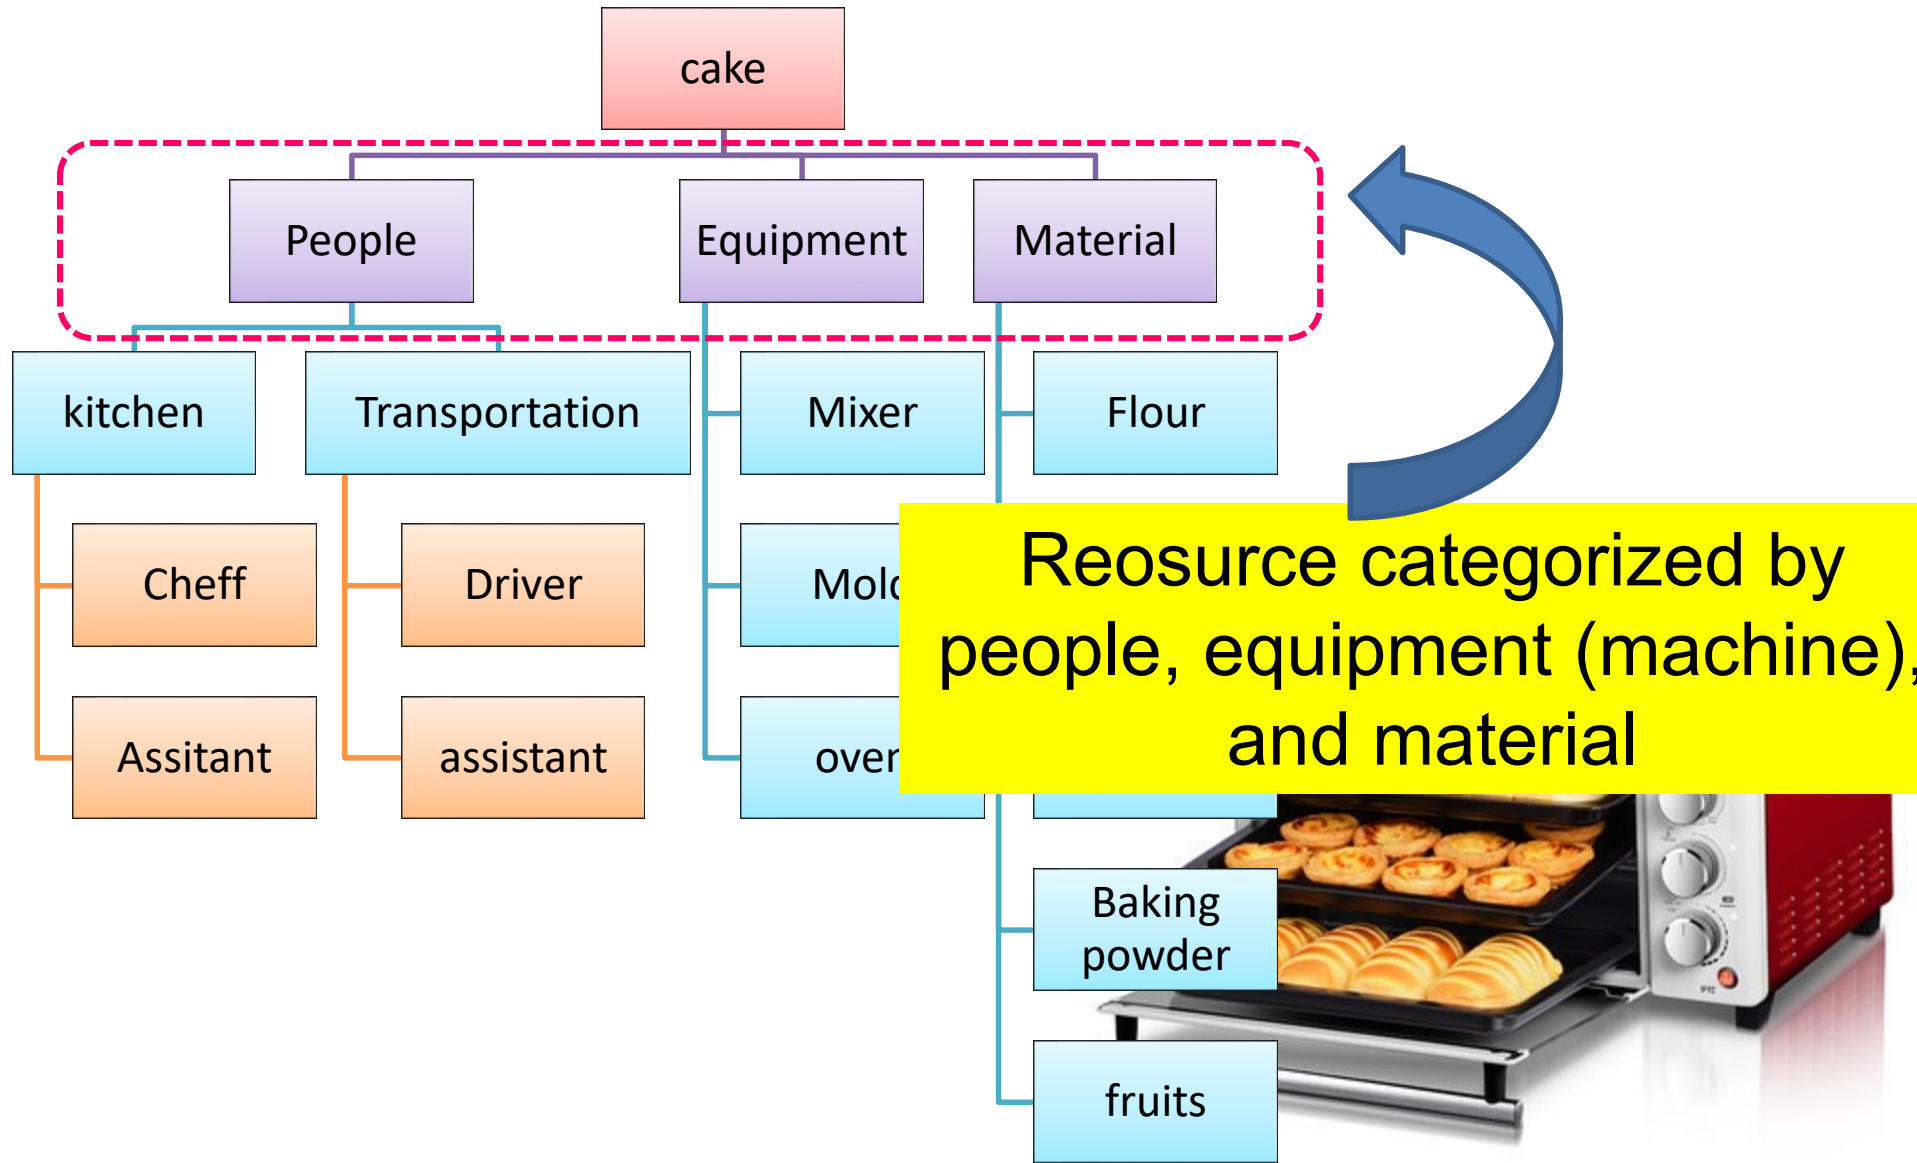

Similar to WBS

# Activity Resource Requirement

ID	Activity	predecessor	Resource (man)	duration (minute)
A	Purchase the material	-	2	30
B	Measure the ingredients	A	2	15
C	Mixing	B	1	15
D	Pre heat the oven	C	1	10
E	Put the batter into mold	C	1	5
F	Bake the cake	C,D	1	120

# Resource Breakdown Structure

# Estimate **ACTIVITY** Duration

estimating the number of work periods that are needed to complete individual activities

## Inputs

1. Schedule Management plan
2. Activity list
3. Activity attributes
4. Activity resource requirements
5. Resource Calendars
6. Project scope statement
7. Risk Register
8. RBS
9. EEF
10. OPA

## Tools & Techniques

1. Expert judgment
2. Analogous estimating
3. Parametric estimating
4. Three-point estimates
5. Group decision making techniques
6. Reserve analysis

## Outputs

1. Activity duration estimates
2. Project document updates

**Effort** is the **number of workdays** or work hours required to **complete a task**

**Duration** includes **the actual amount of time** worked on an activity **plus elapsed time**

# EFFORT VS DURATION

# Analogous Estimate

Use actual duration of previous activity **(historical)** that has similarity

Master, high skill  
Great experience

# Parametric estimate

=

RP.

100.000

=

RP.

200.000

Use statistical relationship or math analysis between historical data and other variables

# Reserves Analysis

# Reserves Analysis

**BAD DESIGN**

# Reserves Analysis

Analyze which the highest risky activity  
And give them reserve time, not too tight!

# THREE POINT ESTIMATE

- Duration estimates based on using optimistic, most likely, and pessimistic estimates of activity durations,

- $t_E = (t_O + t_M + t_P) / 3$

# PERT

- uses probabilistic TIME & COST estimates
- $tE = (tO + 4tM + tP) / 6$

Expected

$$\frac{P + 4M + O}{6}$$

Standard  
Deviation

$$\frac{P - O}{6}$$

Variance

$$\left[ \frac{P - O}{6} \right]^2$$

$$SD = \sqrt{\sum \text{variance}}$$

# Developing Schedule

analyzing activity sequences, activity resource estimates, and activity duration estimates

## Inputs

1. Schedule Management plan
2. Activity list
3. Activity attributes
4. Project schedule network diagram
5. Activity resource requirements
6. Resource Calendars
7. Activity duration estimates
8. Project scope statement
9. Risk Register
10. Project Staff assignment
11. Resource Breakdown structure
12. EEF
13. OPA

## Tools & Techniques

1. Schedule network analysis
2. Critical path method
3. Critical chain method
4. Resource optimization techniques
5. Modeling techniques
6. Applying leads and lags
7. Schedule compression
8. Scheduling tool

## Outputs

1. Project schedule
2. Schedule baseline
3. Schedule data
4. Project Calendar
5. Project Management Plan update
6. Project document updates

# GANTT CHART

Symbols include:

**Black diamonds: milestones**

**Thick black bars: summary tasks**

**Lighter horizontal bars: durations of tasks**

**Arrows: dependencies between tasks**

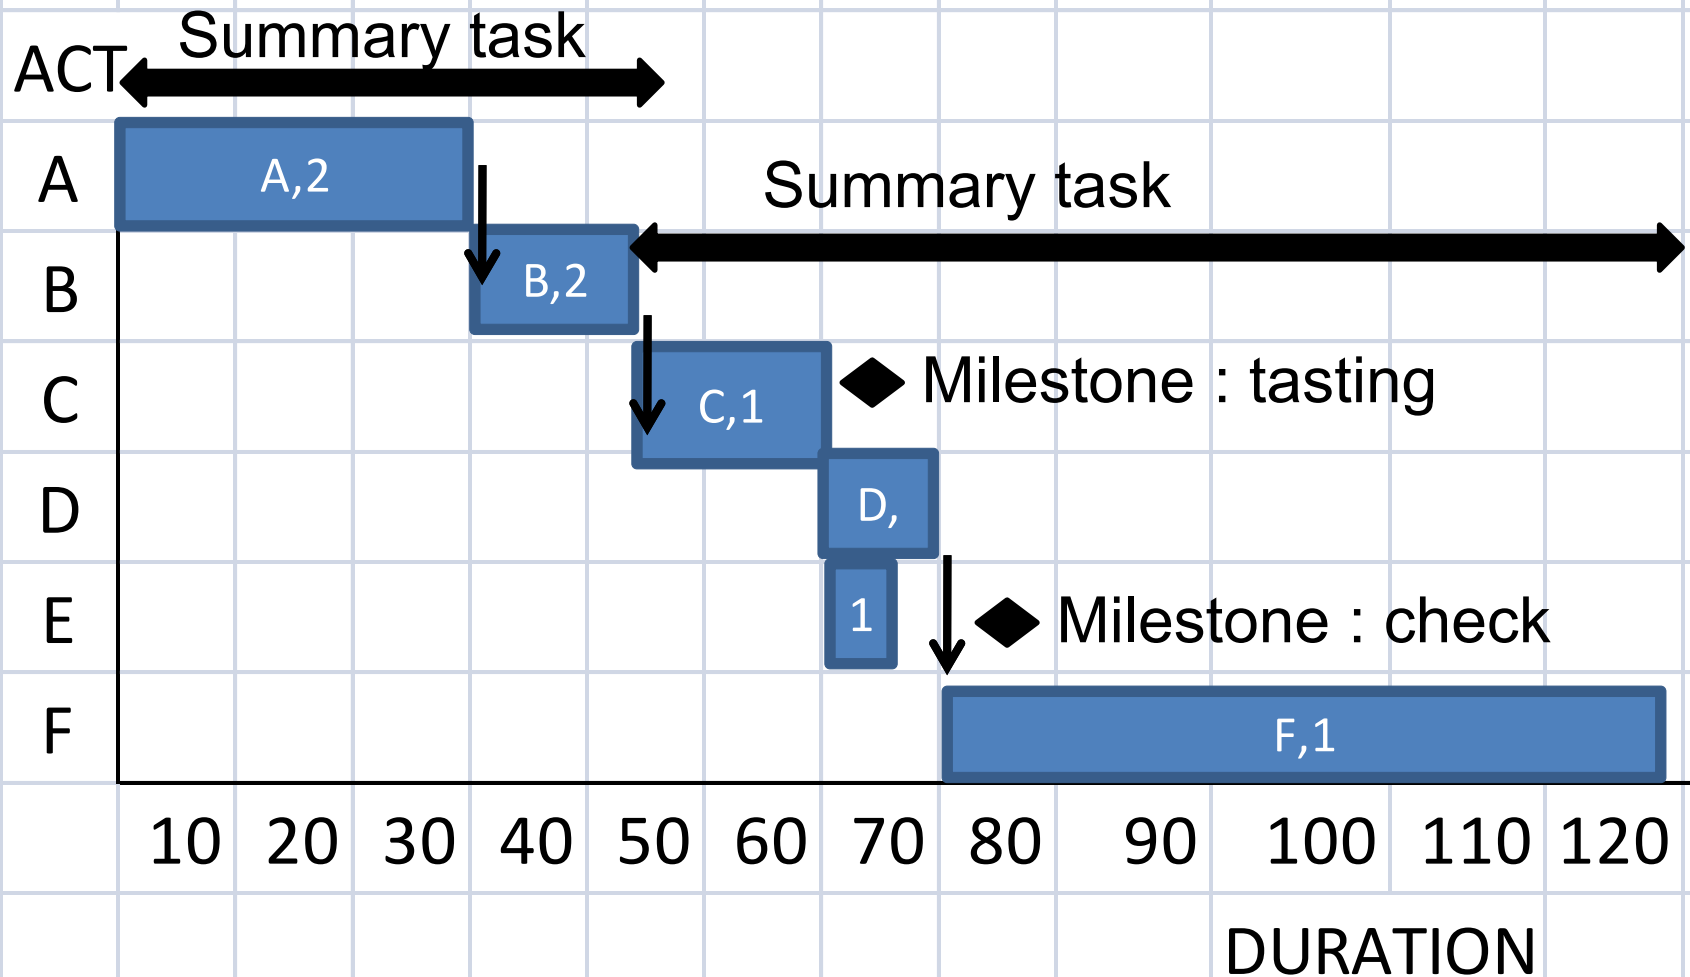

# Resource Calendar

Information (skill, location, etc) in **which resource** are potentially **available**.

ID	Activity	predecessor	Resource (man)	duration (minute)
A	Purchase the material	-	2	30
B	Measure the ingredients	A	2	15
C	Mixing	B	1	15
D	Pre heat the oven	C	1	10
E	Put the batter into mold	C	1	5
F	Bake the cake	C,D	1	120

# Resource Calendar

Plot into Gant Chart format

DURATION

We need only **2** people work this project

2

2

1

2

1

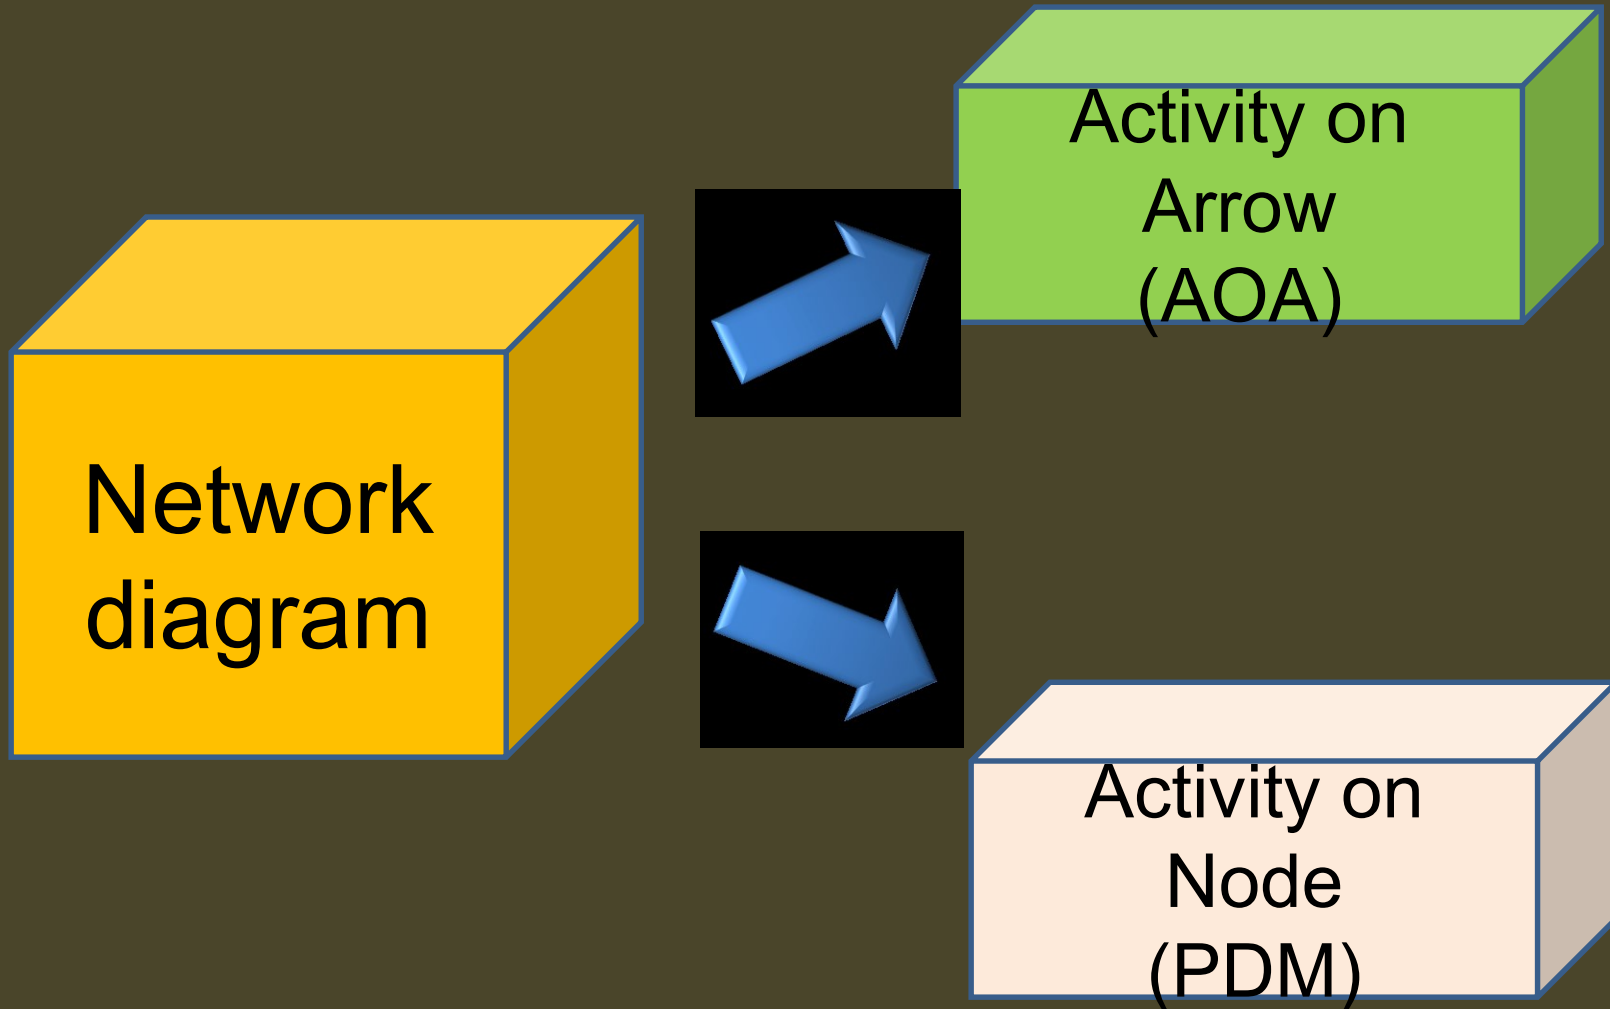

# Adding Milestones to Gantt Charts

- Many people like to focus on meeting milestones, especially for **large projects**
- emphasize **important** events or **accomplishments** on projects
- ZERO DURATION

# Schedule Network Analysis

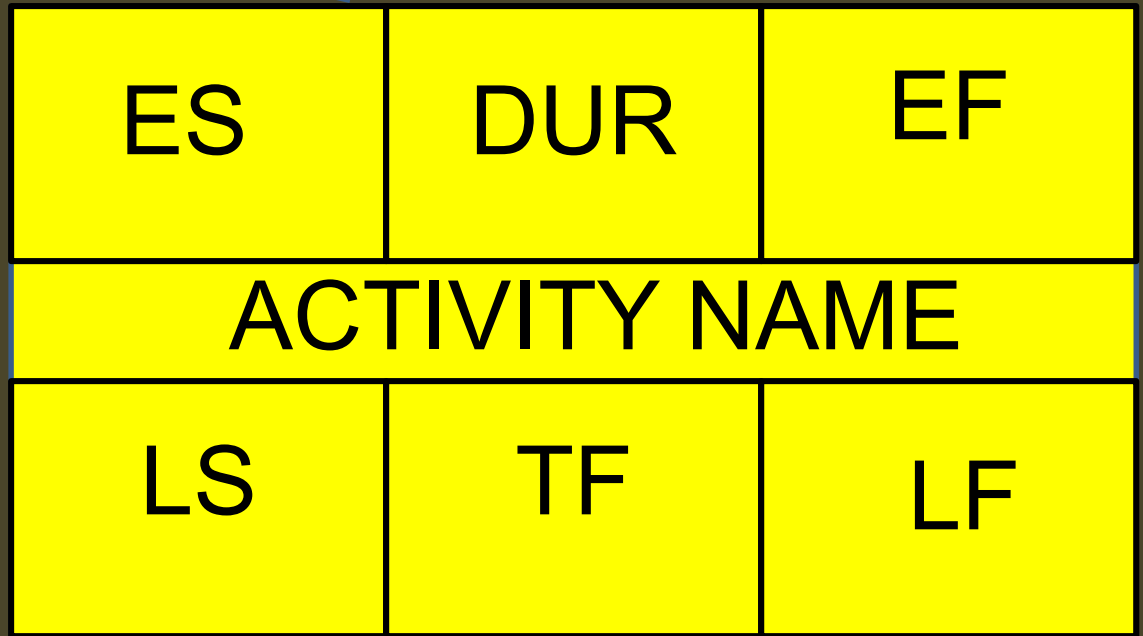

# Schedule Network Analysis

- Start and finish with only one event
- It can be merged and burst activity
- Using dummies

# AON OR PDM RULES

# AON OR PDM RULES

ES	DUR	EF
ACTIVITY NAME		
LS	TF	LF

$$EF = ES + D - 1$$

$$LS = LF - D + 1$$

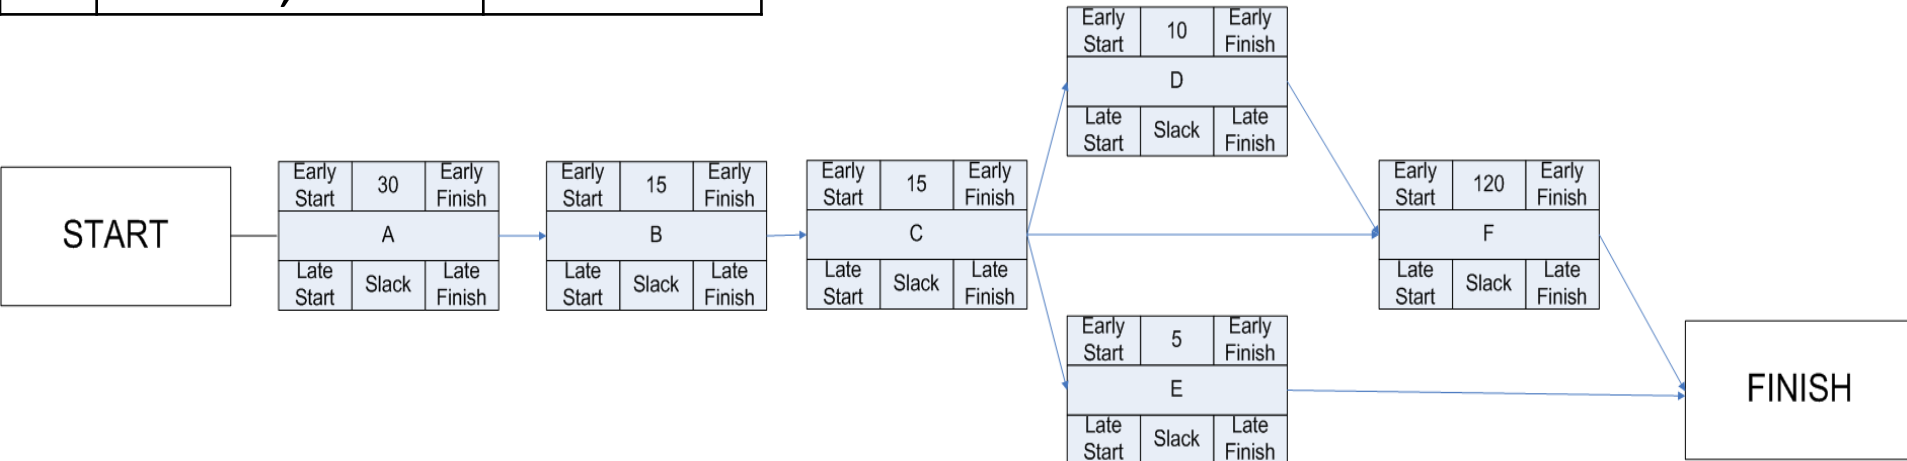

$$\text{Float (F)} = LS - ES = LF - EF$$

- ES= Earliest Time
- EF= Earliest Finish
- Dur= Duration
- EF= Earliest Finish
- LS= Latest Start
- LF= Latest Finish
- TF= total Float or slack (delayed time)

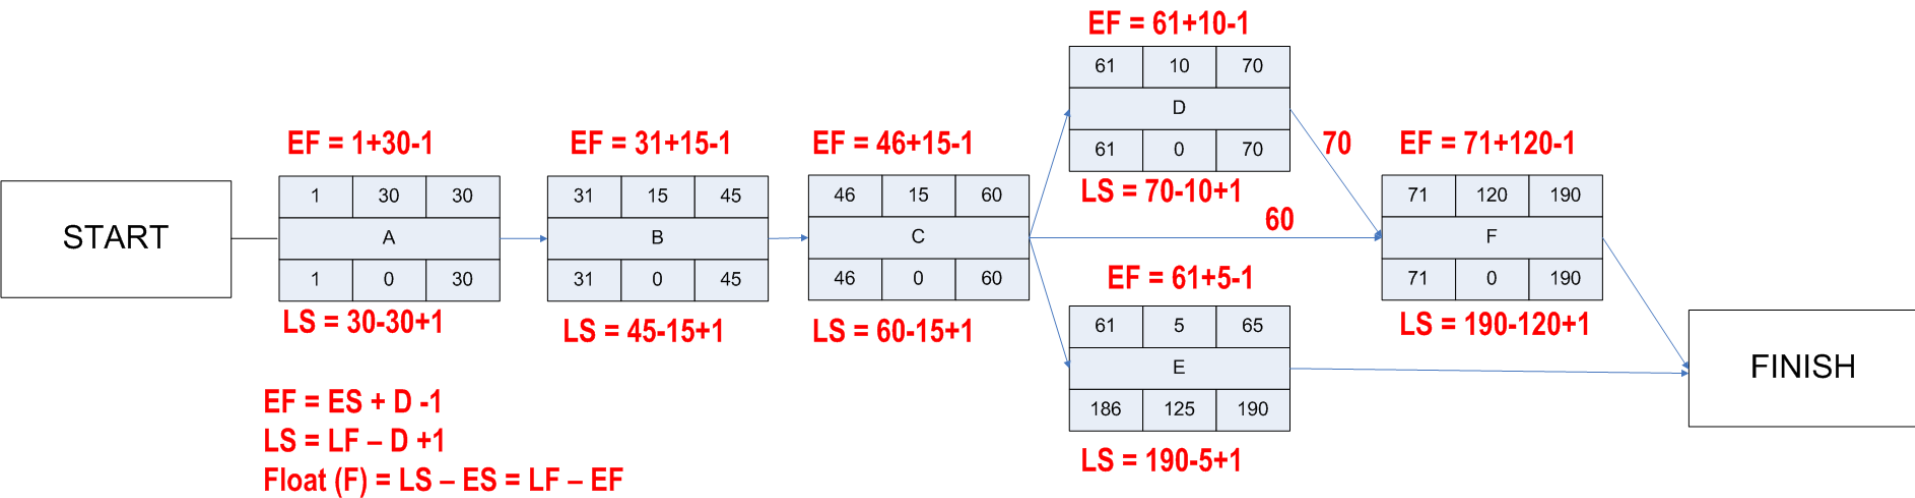

# AON OR PDM PRACTICE

ID	predecessor	duration (minute)
A	-	30
B	A	15
C	B	15
D	C	10
E	C	5
F	C,D	120

Draw network diagram first!

# AON OR PDM PRACTICE

A metal chain with a padlock is shown in the upper left corner of the slide. The chain is made of several interlocking links, and a dark grey padlock is attached to it. The background is white.

# Critical Chain Scheduling

**considers limited resources** when creating a project schedule and **includes buffers** to protect the project completion date

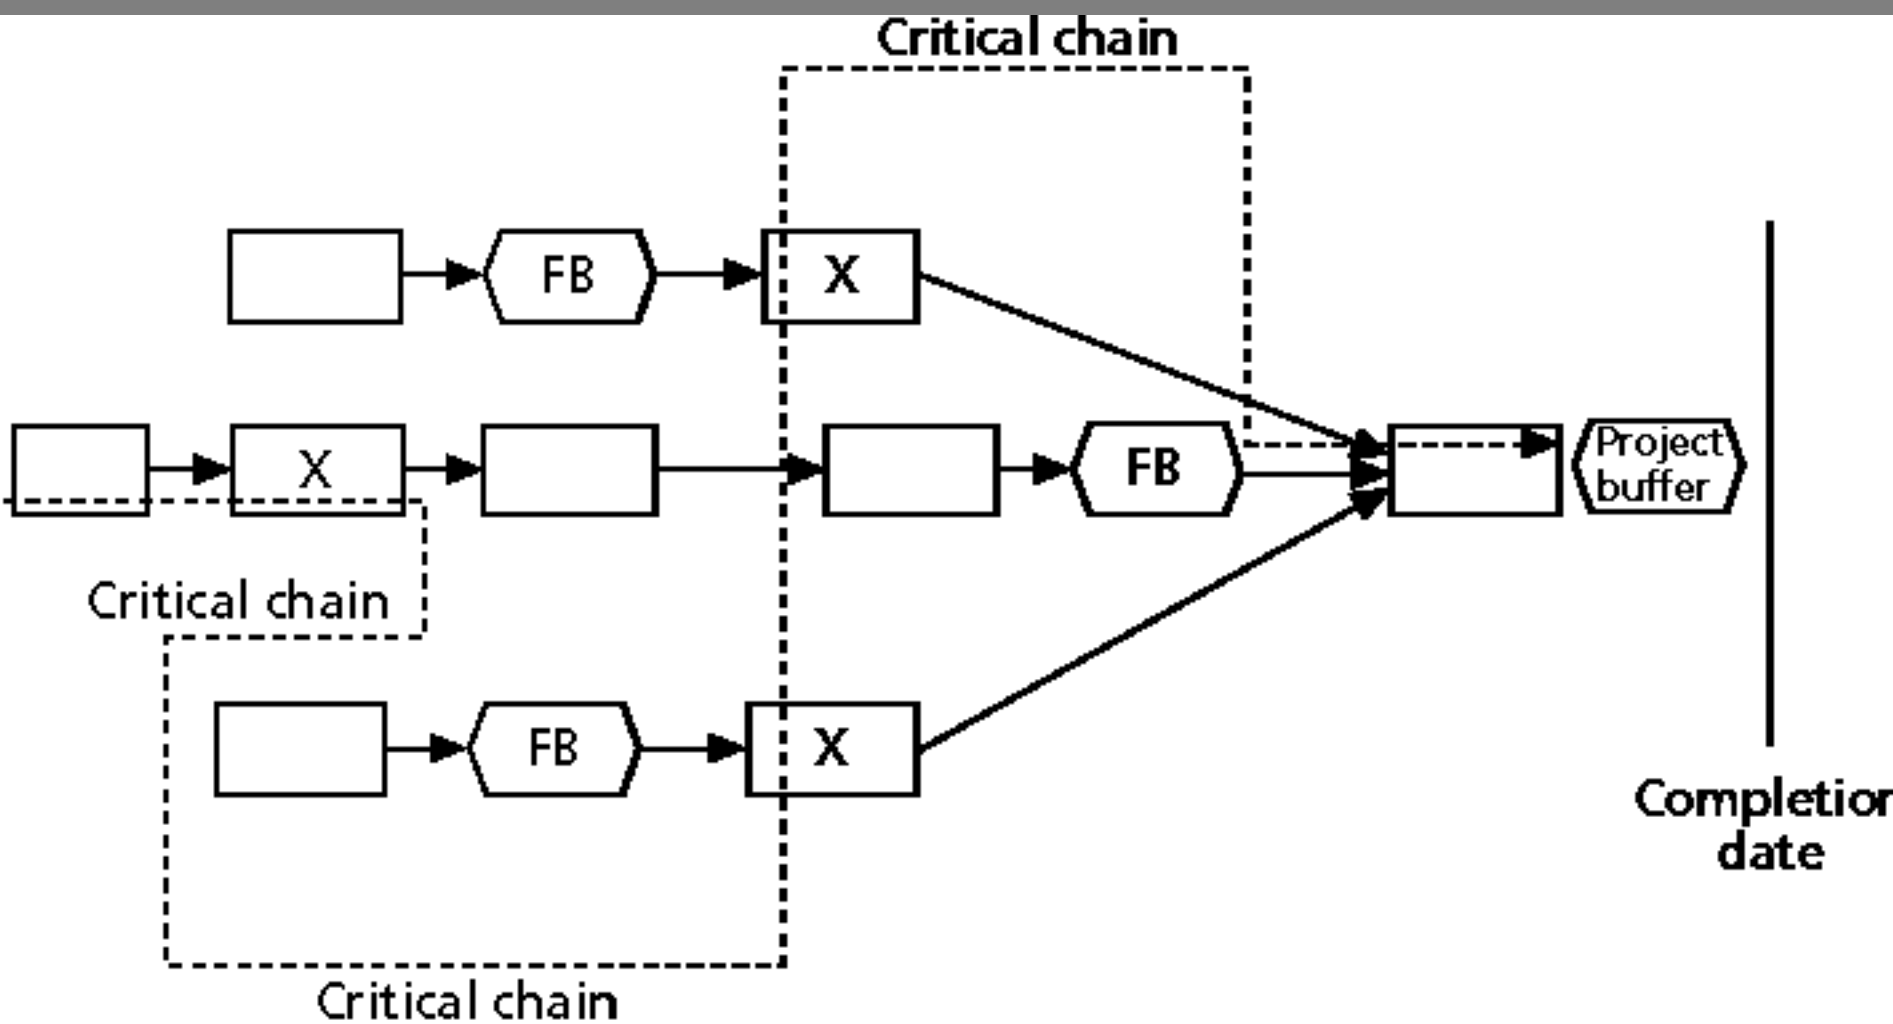

# Buffers and Critical Chain

- **Project buffers** or additional time added **before the project's due date**
- **Feeding buffers** or additional time added **before tasks on the critical path**

# Example of Critical Chain Scheduling

X = Tasks done by **limited resource**  
FB = Feeding buffer

# Schedule Compression: Fast Tracking

- Performing critical path activities in **parallel**.
- Usually **increase risk** and requires **more attention to communication**.
- May need a **rework**.
- E.g. Design is half finished and start coding.

# Schedule Compression: Crashing Method

- Add more resources to finish the task
- Always results in **increased cost.**

# Controlling Schedule

The background image shows a person's hand pointing at a computer screen. The screen displays several data visualization elements: a bar chart on the left, a line chart in the middle, and a table at the bottom. The table has columns for months (Aug, Sep, Oct) and values like \$12,948 and \$18,068. The overall scene is a professional office setting focused on data analysis.

controlling and managing changes to the project schedule

# Controlling the Schedule Goals

- know **the status** of the schedule
- **influence factors** that cause schedule changes,
  - determine that the **schedule has changed**
  - **manage changes** when they occur

## Inputs

1. Project Management Plan
2. Project Schedule
3. Work performance data
4. Project calendars
5. Schedule data
6. Organizational process assets

## Tools & Techniques

1. Performance reviews
2. Project Management Software
3. Resource optimization techniques
4. Modeling techniques
5. Adjusting leads & lags
6. Schedule compression
7. Schedule tooling

## Outputs

1. Work performance information
2. Schedule forecasts
3. OPA updates
4. Change requests
5. Project management plan updates
6. Project document updates

# Schedule Control Suggestions

- First review the **draft schedule or estimated** completion date in the project charter
- Prepare a **more detailed schedule** with the project team
- **realistic** and **followed**
- **Alert top management** for problem

Perform reality checks on schedules:

# Schedule Control Suggestions

Allow for **contingencies**

# Schedule Control Suggestions

**Don't plan** for everyone to work at **100%** capacity all the time

# Schedule Control Suggestions

Hold **progress meetings** with stakeholders and **be clear and honest** in communicating schedule issues

**Why Projects Are Often Late?**

**Many project managers estimate** project duration and cost by simply adding up **most likely estimates** of activity durations and costs;

# TOP TEN REASONS I PROCRASTINATE:

- 1.

# **Multitask** contractor or vendor

# OVERCONFIDENCE

Always a bit risky.
